M.TECH. IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	ADVANCED POWER SYSTEM PROTECTION	L	Т	P	C
21D07101		3	0	0	3
	Semester	I			
Course Objectiv	ves: To make the student				
	construction of static relays				
	stand the operation of amplitude and phase comparators				
	rehend the concepts of Static over current, static differential and static	distan	ce relay	'S.	
 To under 	stand multi-input comparators and concept of power swings on the dis	tance	relays.		
 To know 	the operation of microprocessor based protective relays				
Course Outcom	es (CO):Student will be able to				
 Describe 	the construction of static relay and identify the advantages of static re	elay ov	ver elect	tromagi	netic
relay An	alyse the importance of reliability in various fields.	•			
 Explore 	the operation of rectifier bridge comparators, instantaneous comparators	rators,	, phase	compa	rators,
multi inp	out comparators, static differential and distance relays				
	instantaneous, definite time and inverse definite minimum time over c				
	the concept of power swings on distance relays and to identify the	ne mic	roproce	essor b	ased
	re relays and their operation				
UNIT – I	STATIC RELAYS & COMPARATORS		ure Hrs:		
	asic construction of Static relays – Level detectors – Replica Impedance				
	input phase and Amplitude Comparators - their types - Duality betw				
	nic section characteristics-Three input Amplitude Comparator - Hybr				
	s - Polyphase distance schemes-Phase faults scheme -Three phase	e sche	eme–Co	mbined	l and
Ground fault sch		-			
UNIT - II	TYPES OF STATIC RELAYS		ure Hrs:		
	er current relay - Time over current relays - Basic principles - Definite				
	t relays, directional over current relays - Static Differential Relays-And			differe	ential
	sy schemes-Dual bias transformer differential protection – Harmonic re	1			
UNIT - III	NUMERICAL RELAYS:		ure Hrs:		
	umerical Relays - Numerical network-Digital Signal processing-Estir				
	Igorithm – Half Cycle Fourier Algorithm- practical considerations for	r selec	ction of	Algori	thm–
Discrete Fourier		-			
UNIT - IV	DISTANCE RELAYS AND POWER SWINGS	1	ure Hrs		
	telays - Static Impedance - reactance - MHO and Angle Impedance rel	ay san	npling c	ompara	ator –
	actance and MHO relay using a sampling comparator.				
	swings on the performance of Distance relays- Power swing analysis -		iple of	out of s	tep
	king relays - Effect of line length and source impedance on distance re			10	
UNIT - V		1	ure Hrs		
	ays – Impedance relays – Directional relay – Reactance relay (Blo				
	Generalized mathematical expression for distance relays-Measur				
reactance – MH0	O and offset MHO relays – Realization of MHO characteristics – Re	alizat	10n of (Ittset I	MHO

characteristics (Block diagram and flow chart approach only) - Basic principle of Digital computer relaying.

M.TECH. IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	POWER SYSTEM SECURITY AND STATE	L	T	P	C
21D07102	ESTIMATION	3	0	0	3
	Semes	ter	•	I	
		•			
Course Objectiv	ves: To make the student				
Understa	and the basic concepts of network matrices, power flow	methods	, state e	estimatic	n, and
applicati	ons of power system state estimation and structure of deregula	ted power	system.		

- Analyze about admittance/impedance matrices, factors influencing power system security, network problems and power wheeling transactions.
- Implement the methods for determining the bus matrices, optimal ordering, DC power flow, AC power flow, estimating a value and Available Transfer Capability (ATC).
- Develop the algorithm for orthogonal matrix, method to identify network problems and congestion management methods and electricity sector structure.

Course Outcomes (CO): Student will be able to

- Understand the concepts of network matrices, power flow methods, contingency analysis, state estimation, and need and conditions for deregulation.
- Analyze the bus admittance/impedance matrices methods, power system security, sensitivity factors, state estimation and electricity structure model.
- Apply the methods for evaluating the bus matrices, sparsity, DC power flow, AC power flow, estimating a value and Available Transfer Capability (ATC).
- Develop the methods for state estimation, method to identify network problems and methods for congestion management.

UNIT - I Power System Network Matrices Lecture Hrs: 10

Formation of bus admittance matrices by direct inspection method and singular transformation method – Algorithm for formation of Bus impedance matrix: addition of a branch and addition of a link, removal element in Bus impedance matrix— Sparsity programming and Optimal Ordering – Numerical problems – ∏-representation of off-nominal tap transformers.

UNIT - II Power System Security-I Lecture Hrs: 9

Review of power flow methods (qualitative treatment only)— DC power flow method-simple problems — Introduction to power system security — Factors influencing power system security.

UNIT - III Power System Security-II Lecture Hrs: 10

Introduction to contingency analysis – Contingency analysis: Detection of Network problems, linear sensitivity factors –AC power flow methods– Contingency selection– Simple problems.

UNIT - IV State Estimation in Power System Lecture Hrs: 10

Power system state estimation – SCADA –EMS center, Methods of state estimation – Method of least squares, Orthogonal matrix–Properties– Givens rotation–Orthogonal decomposition–Bad data detection, Pseudo measurements and applications of power system state estimation – Simple problems.

UNIT - V Security in Deregulated Environment Lecture Hrs: 9

Need and conditions for deregulation—Electricity sector structure model — Power wheeling transactions — Congestion management methods— Available Transfer Capability (ATC) — System security in deregulation.

	COMMON COURSE STRUCTURE & SYLI	LABI			
Course Code	MODELLING AND ANALYSIS OF HVDC	L	T	P	С
21D07103b	TRANSMISSION SYSTEMS (PE-I)	3	0	0	3
<u>'</u>	Seme	ster		I	u u
 To understa To analyze To apply m To design of 	: To make the student and the concept, planning of DC power transmission. HVDC converters, Transient and Dynamic Stability. odeling of power flow analysis. ligital dynamic simulation of converters and DC systems				
Course Outcomes	(CO): Student will be able to				
 To identi 	fy the electrical requirements for HVDC lines.				

- Analyze the different modes of operation for six pulse & twelve pulse converter unit in the context of HVDC system.
- Apply the knowledge of HVDC transmission in Power networks.
- Determine the appropriate HVDC transmission line parameters under different physical conditions

UNIT – I **HVDC CONVERTERS AND SYSTEM CONTROL** Lecture Hrs: 10

Analysis of HVDC Converters: Pulse number – choice of converter configuration – simplified analysis of Graetz circuit – converter bridge characteristics.

Converter and HVDC system control: Principles of DC link control – converter control characteristics – system control hierarchy – firing angle control – current and extinction angle control – starting and stopping of DC link power control.

UNIT – II	MODELING FOR POWER FLOW ANALYSIS OF	Lecture Hrs: 9
	AC/DC SYSTEMS	

Modeling of HVDC Components: HVDC Converter model - Converter control - Modeling of DC network -Modeling of AC Network.

Power flow analysis in AC/DC systems: Modeling of DC links -Multi terminal DC links- Solution of DC load flow –per unit system for DC qualities – Solution of AC/DC power flow.

UNIT - III	TRANSIENT	AND	DYNAMIC	STABILITY	Lecture Hrs: 10
	ANALYSIS				

Transient stability Analysis – Converter model – Converter control models – DC network models – solution methodology – Direct methods for stability Evaluation.

Dynamic Stability and power modulation - Power modulation for damping low frequency oscillations - Basic principles – practical consideration in the application of power modulation controllers – Gamma or reactive power modulation – power modulation in MTDC system – voltage stability in AC/DC system.

UNIT - IV HARMONIC AND TORSIONAL INTERACTIONS Lecture Hrs: 10

Harmonic and Torsional Interactions: Harmonic Interactions - Torsion Interactions - Torsional interactions with in HVDC systems – counter measures to torsion interactions with DC systems.

Simulation of HVDC systems: System simulation – philosophy & Tools – HVDC system simulation – modeling of HVDC systems Digital dynamic simulation.

MODELING OF HVDC SYSTEMS Lecture Hrs: 9

Digital dynamic simulation of converters and DC systems: Valve model, Gate pulse generation – generation of control voltage – transformer model – converter model – transient simulation of DC and AC systems.

	yze the concept of Effect of series and shunt resistance on efficiency, Effect o	f sol	ar radi	ation	on			
	ciency, Analytical techniques, Hot spots in the module, Algorithms for MPPT ar							
	gn of PV powered DC fan without battery, Standalone system with DC loa		ing M	PPT,	PV			
power	red DC pump, standalone system with battery and AC/DC load and control	prin	ciples	of W	/ind			
turbin		•	•					
UNIT – I	SOLAR & WIND FUNDAMENTALS	Lec	ture H	rs: 10)			
Need for sustai	nable energy sources – solar radiation – the sun and earth movement – angle	of su	ınrays	on so	olar			
	n tracking – estimating solar radiation – measurement of solar radiation. Typ							
	vices – definition - solidity, tip speed ratio, power coefficient, wind tu							
	aerodynamics of wind rotors - design of the wind turbine rotor - Issues du							
	energy systems.		J					
UNIT – II	SOLAR PHOTOVOLTAIC MODULES	Lec	ture H	rs: 9				
	<u>l</u>							

Solar PV Modules from solar cells – model of a solar cell, effect of series and shunt resistance on efficiency, effect of solar radiation on efficiency - series and parallel connection of cells – mismatch in module – mismatch in series connection – hot spots in the module, bypass diode – mismatching in parallel diode – design and structure of PV modules – number of solar cells in a module, wattage of modules, fabrication of PV module – PV module power output.

UNIT - III PV SYSTEM DESIGN AND APPLICATIONS

Lecture Hrs: 10

Introduction to solar PV systems – standalone PV system configuration – design methodology of PV systems – design of PV powered DC fan without battery, standalone system with DC load using MPPT, design of PV powered DC pump, design of standalone system with battery and AC/DC load – wire sizing in PV system – precise sizing of PV systems – Hybrid PV systems – grid connected PV systems.

UNIT – IV WIND TURBINE CONTROL SYSTEMS & SITE ANALYSIS Lecture Hrs: 10

Wind Turbine - Torque speed characteristics - Pitch angle control - stall control - power electronic control - Yaw control - Control strategy - Wind speed measurements - Wind speed statistics - Site and turbine selection. Constant voltage & constant frequency- single output system -double output system with current converter & voltage source inverter - equivalent circuits - reactive power and harmonics - reactive power compensation - variable voltage, variable frequency - the self-excitation process - circuit model for the self-excited induction generator - analysis of steady state operation - the excitation requirement - effect of a wind generator on the network .

UNIT – V WIND GENERATION WITH VARIABLE SPEED Lecture Hrs: 11

M.TECH. IN ELECTRICAL POWER SYSTEMS / POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

TURBINES AND APPLICATIONS

Classification of schemes – operating area – induction generators – doubly fed induction generator – wound field synchronous generator – the permanent magnet generator – Merits and limitations of wind energy conversion systems – application in hybrid energy systems – diesel generator and photovoltaic systems – wind photovoltaic systems.

Course Code	SMART GRID TECHNOLOGIES	L	T	P	С
21D07104b	(PE-II)	3	0	0	3
	Semester	I			
Course Object	ives: To make the student				
• To k	now the importance of smart grid technology functions over the present grid.				
	et the knowledge about the measurement system and communication techno	logy	of Sma	ırt gri	d.
-	nhance the quality, efficiency and security of power supply.	0,5		υ	
	mpart an understanding of economics, policies and technical regulations for D	G inte	gration	n.	
	mes (CO): Student will be able to		<u> </u>		
	erstand the importance of smart grid technology functions over the present grid	 1.			
	y the knowledge about the measurement system and communication technology		:		
	rt grid.	0,5			
• Dete	rmine the quality, efficiency and security of power supply.				
• Impa	rt an understanding of economics, policies and technical regulations for DG in	itegraf	tion.		
UNIT – I	SMART GRIDS	Leci	ture Hi	rs: 10	
Smart grid ove	erview- ageing assets and lack of circuit capacity- thermal constraints, op	eratio	onal co	onstra	ints,
security of sup	ply- national initiatives- early smart grid initiatives- active distribution net	work	s- virt	ual po	ower
plant- other init	ciatives and demonstrations- overview of the technologies required for the small	art gri	id.		
UNIT – II	TRANSMISSION AND DISTRIBUTION MANAGEMENT	Lect	ture Hi	rs: 10	
Data Sources- l	Energy Management System-Wide Area Applications, Visualization Techniq	ues- I	Data S	ource	s and
Associated Ex	ternal Systems- SCADA- Customer Information System- Modeling	and	Analys	sis T	ools,
	stem Modeling- Topology Analysis- Load Forecasting- Power Flow Analys				
State Estimation	on- Applications-System Monitoring- Operation- Management- Outage M	A anag	gement	Syst	tem-
Overview of en	ergy storage technologies.				

SMART METERING AND DEMAND SIDE INTEGRATION | Lecture Hrs: 11 UNIT - III

Overview- Smart metering – Evolution of electricity metering- key components of smart metering- smart meters: an overview of the hardware used - signal acquisition- signal conditioning-analogue to digital conversioncomputation-input/output and communication. Communication infrastructure and protocols for smart metering -Home area network, Neighborhood Area Network- Data Concentrator- meter data management system- Protocols for communication. Demand Side Integration- Services Provided by DSI-Implementation of DSI- Hardware Support- Flexibility Delivered by consumers from the Demand Side- System Support from DSI.

UNIT – IV COMMUNICATION TECHNOLOGIES FOR THE SMART Lecture Hrs: 10 GRID

Data Communications: Dedicated and Shared Communication Channels, Switching Techniques, Circuit Switching, Message Switching, Packet Switching- Communication Channels, Introduction to TCP/IP. Communication Technologies: IEEE 802 Series- Mobile Communications- Multi-Protocol Label Switching-Power line Communication.

UNIT - V INFORMATION SECURITY FOR THE SMART GRID Lecture Hrs: 10

Overview- Encryption and Decryption, Symmetric Key Encryption- Public Key Encryption- Authentication-Authentication Based on Shared Secret Kev- Authentication Based on Kev Distribution Center- Digital Signatures- Secret Key Signature-Public Key Signature- Message Digest.

M.TECH. IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	ELECTRIC VEHICLE ENGINEERING	L	T	P	C
21D07104c	(PE-II)	3	0	0	3
	Semester	I			

Course Objectives: To make the student

- Remember and Understand the differences between conventional Vehicle and Electric Vehicles, electro mobility and environmental issues of EVs.
- Analyze various EV configurations, parameters of EV systems and Electric vehicle dynamics.
- Analyze the basic construction, operation and characteristics of fuel cells and battery charging techniques in HEV systems.
- Design and analyze the various control structures for Electric vehicle

Course Outcomes (CO): Student will be able to

- To understand and differentiate between Conventional Vehicle and Electric Vehicles, electro mobility and environmental issues of EVs.
- To remember and understand various configurations in parameters of EV system and dynamic aspects of EV.
- To analyze fuel cell technologies in EV and HEV systems.
- To analyze the battery charging and controls required of EVs.

UNIT – I Introduction to EV Systems and Energy Sources Lecture Hrs: 10

Past, Present and Future of EV - EV Concept- EV Technology- State-of-the Art of EVs- EV configuration- EV system- Fixed and Variable gearing- Single and multiple motor drive- In-wheel drives- EV parameters: Weight, size, force and energy, performance parameters.

Electro mobility and the environment- History of Electric power trains- Carbon emissions from fuels-Green houses and pollutants- Comparison of conventional, battery, hybrid and fuel cell electric systems.

UNIT – II EV Propulsion and Dynamics

Lecture Hrs: 10

Choice of electric propulsion system- Block diagram- Concept of EV Motors- Single and multi motor configurations- Fixed and variable geared transmission- In-wheel motor configuration- Classification- Electric motors used in current vehicle applications- Recent EV Motors- Vehicle load factors- Vehicle acceleration.

UNIT - III Fuel Cells

Lecture Hrs: 10

Introduction of fuel cells- Basic operation- Model - Voltage, power and efficiency- Power plant system – Characteristics- Sizing - Example of fuel cell electric vehicle.

Introduction to HEV- Brake specific fuel consumption - Comparison of Series-Parallel hybrid systems-Examples.

UNIT – IV Battery Charging and Control

Lecture Hrs: 12

Battery charging: Basic requirements- Charger architecture- Charger functions- Wireless charging-Power factor correction.

Control: Introduction- Modeling of electro mechanical system- Feedback controller design approach- PI controllers designing- Torque-loop, Speed control loop compensation- Acceleration of battery electric vehicle.

UNIT – V Energy Storage Technologies

Lecture Hrs: 10

Role of Energy Storage Systems- Thermal- Mechanical-Chemical- Electrochemical- Electrical - Efficiency of energy storage systems- Super capacitors-Superconducting Magnetic Energy Storage (SMES)- SoC- SoH -fuel cells - G2V- V2G- Energy storage in Micro-grid and Smart grid- Energy

M.TECH. IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code MACHINES & POWER SYSTEMS LAB			T	P	C
21D07105		0	0	4	2
	Semester			I	

Course Objectives: To make the student

- Understand the experiments ensuring the safety of equipment and personnel.
- Analyze the power system data fault studies.
- Interpret the experimental results and correlating them with the practical power system.
- Design the relays for power system protection purpose.

Course Outcomes (CO):Student will be able to

- Understand the concept of different experiments.
- Analyze the data for and compute the data to obtain results.
- Apply the computational results to solve the original power system problems.
- Develop advanced relays to identify various faults.

List of Experiments:

- 1. Determination of Subtransient Reactance of a Salient Pole Machine
- 2. Determination of Sequence Impedances of a Cylindrical Rotor Synchronous Machine
- 3. Fault Analysis
 - i) LG Fault
 - ii) LL Fault
 - iii) LLG Fault
 - iv) LLLG Fault
- 4. Equivalent Circuit of a Three Winding Transformer
- 5. Separation of No Load losses of a Three Phase Squirrel Cage Induction Motor
- 6. Power Angle Characteristics of a Salient Pole Synchronous Machine
- 7. Characteristics of Static/Numeric Over Current Relay
- 8. Characteristics of Static Negative Sequence Relay
- 9. Characteristics of Static/Numeric Over Voltage Relay
- 10. Characteristics of Static/Numeric Percentage Biased Differential Relay
- 11. Testing of Buchholz relay
- 12. Testing of Frequency Relay.
- 13. Testing of Reverse Power Relay.
- 14. Testing of Earth fault Relay

M.TECH. IN ELECTRICAL POWER SYSTEMS / POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	POWER SYSTEMS SIMULATION LAB	L	T	P	С
21D07106		0	0	4	2
	Semester	Ι			

Course Objectives: To make the student

- Understand how to write the coding in simulation
- Analyze the data related to load flows, economic dispatch problem and transient stability analysis.
- Apply the computational results in real life power system problems.
- Have the capabilities to develop new software's to optimize the results.

Course Outcomes (CO): Student will be able to

- Understand the coding in simulation
- Analyze the power system data for load-flow and stability studies.
- Apply computational methods for large scale power system studies.
- Develop software for power system industry to solve various issues.

List of Experiments:

- 1. Y Bus Formation
- 2. Gauss Seidel Load Flow Analysis
- 3. Fast Decoupled Load Flow Analysis
- 4. Fast Decoupled Load Flow Analysis for Distribution Systems
- 5. Point by Point Method
- 6. Computation of Available Transfer Capabilities.
- 7. Contingency analysis.
- 8. State estimation using Weighted Least Square, linear and non-linear methods.
- 9. Simulation of power quality problems (Sag/Swell, interruption, transients, harmonics, flickers etc.)
- 10. Harmonic analysis and Single tuned filter design to mitigate harmonics.
- 11. Harmonic analysis and Double tuned filter design to mitigate harmonics.

21D07201	POWER SYSTEM STABILITY & CONTROL	3	0	0	3
	Semester			II	
	es: To make the student				
	tand about linear and nonlinear models of multi-machine power sys	tems.			
-	e various types of stability properties of power systems.				
	y power system models from dynamic data and simulate excitation	mecha	inisms ii	n synchi	onous
machin		41.:1	:41:		
	excitation systems and their state space model equations for further	stabil	ну аррп	cations.	
	es (CO): Student will be able to tand the concepts of single and multi-machine systems connected to	infini	to bug b	25	
	e system responses to small disturbances and concept of dynamic st				am
stabiliz	• • •	aomiy	and pov	wei sysi	CIII
	the various stability methods to evaluate the stability of the system.				
	the state space model equations for excitation systems and method	s for f	inding v	oltage	and
angle inst	* *			8-	-
UNIT - I	THE ELEMENTARY MATHEMATICAL MODEL	Lect	ure Hrs:	10	
Introduction to ed	ual area criteria – Power Angle curve of a Synchronous Machine	– Mod	lel of sir	igle mad	chine
connected to an	infinite bus - Model of multimachine system - Problems - 0	Classic	al Stab	ility Stı	udy of
	tem – Effect of the excitation system on Transient stability.				
UNIT - II	SYSTEM RESPONSE TO SMALL	Lect	ure Hrs:	8	
	DISTURBANCES AND DYNAMIC STABILITY				
	synchronous Machine - Modes of oscillation of an unregula				
	onous machine - Voltage regulator with one time lag - Governor v				
	mic stability – State-space model of single machine system connect			ous – Ef	fect of
	amic stability – Examination of dynamic stability by Routh-Hurwit			10	
UNIT - III	POWER SYSTEM STABILIZERS	Lect	ure Hrs:	12	
	pplementary stabilizing signals - Block diagram of the linear syst				
	ter – Generator system – Lead compensation – Stability analysis us				ıch.
UNIT - IV	EXCITATION SYSTEMS	Lect	ure Hrs:	12	
	xcitation systems - Non-continuously, Continuously regulated s				
	State-space description of the excitation system - Simplified				
•	nerator power limits. Type-2, Type-3 and Type-4 excitation sy	stems	and the	ir state-	space
modeling equatio	ne				

UNIT - V STABILITY ANALYSIS

Lecture Hrs:10

Review of Lyapunov's stability of non-liner systems using energy concept — Method based on first concept — Method based on first integrals — Zubov's method — Popov's method — Lyapunov function for single machine connected to infinite bus — Voltage stability — Factors affecting voltage instability and collapse — Comparison of Angle and Voltage stability — Analysis of voltage instability and collapse — Control of voltage instability.

M.TECH, IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	FACTS CONTROLLERS	L	T	P	C
21D07202	FACIS CONTROLLERS	3	0	0	3
	Semester			II	
Course Objective	s: To make the student				
To unders	tand the fundamentals of FACTS Controllers, Importance of controllers	rollable	e param	eters an	d types
	controllers & their hanefits		•		- 1

- of FACTS controllers & their benefits
- To explain control of STATCOM and SVC and their comparison and the regulation of STATCOM
 To remember the objectives of Shunt and Series compensation
- To analyze the functioning and control of GCSC, TSSC and TCSC
- To analyze the functioning and control of Gese, 155c a

Course Outcomes (CO): Student will be able to

- Understand various control techniques for the purpose of identifying the scope and for selection of specific FACTS controllers.
- Remember different types of controllable VAR generation and variable impedance techniques.
- Design simple converters using FACTS controllers.
- Understand the operation of Unified Power Controller and Hybrid Arrangements.

UNIT - I FACTS CONCEPTS, VSI AND CSI Lecture Hrs: 10

Transmission interconnections power flow in an AC system, loading capability limits, Dynamic stability considerations, importance of controllable parameters basic types of FACTS controllers, benefits fromFACTS controllers. Single phase three phase full wave bridge converters transformer connections for 12 pulse 24 and 48 pulse operation. Three level voltage source converter, pulse width modulation converter, basic concept of current source Converters, and comparison of current source converters with voltage source converters.

UNIT - II SHUNT COMPENSATION Lecture Hrs: 8

Objectives of shunt compensation - Methods of controllable var generation - Variable impedance type static var generators - switching converter type var generators - hybrid var generators - Comparison of SVC and STATCOM.

UNIT - III SERIES COMPENSATION Lecture Hrs: 12

Objectives of series compensation – GTO Thyristor Controlled Series Capacitor (GCSC) - Thyristor Switched Series Capacitor (TSSC) - Thyristor Controlled Series Capacitor (TCSC) - Control schemes for TCSC, TSSC and TCSC.

UNIT - IV UNIFIED POWER FLOW CONTROLLER (UPFC) Lecture Hrs:12

Introduction - The Unified Power Flow Controller - Basic Operating Principles - Conventional Transmission Control Capabilities - Independent Real and Reactive Power Flow Control - Control Structure - Basic Control System for P and Q Control - Hybrid Arrangements: UPFC With a Phase Shifting Transformer.

UNIT - V INTERLINE POWER FLOW CONTROLLER (IPFC) Lecture Hrs:10

Introduction, basic operating principle and characteristics of IPFC, control structure, practical and application considerations, generalized and multifunctional fact controllers

M.TECH. IN ELECTRICAL POWER SYSTEMS / POWER SYSTEMS

M.TECH, IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	POWER SYSTEM WIDE AREA MONITORING AND	L	T	P	C
21D07203a	CONTROL (PE – III)	3	0	0	3
	Semester	II	•	•	

Course Objectives: To make the student

- To know the necessity of real-time computer control of power systems and wide area measurement system.
- To get the knowledge of different automation systems.
- To know the complete fundamentals of SCADA and its importance in real time powersystems.
- To get the knowledge about Substation Automation, New Digital Substation and traditional approach and IED-based approach of Integrated Protective Functions.
- To study about Voltage stability, prevention of voltage collapse and dynamic stabilityanalysis.

Course Outcomes (CO): Student will be able to

- Know the necessity of real-time computer control of power systems and wide area measurement system.
- Get the knowledge of different automation systems.
- Know the complete fundamentals of SCADA and its importance in real time powersystems.
- Get the knowledge about Substation Automation, New Digital Substation and traditional approach and IED-based approach of Integrated Protective Functions.
- Study about Voltage stability, prevention of voltage collapse and dynamic stabilityanalysis.

UNIT - I COMPUTER CONTROL OF POWER SYSTEMS Lecture Hrs: 10

Need for computer control of power systems, Operating states of a power system, Supervisory Control and Data Acquisition system, Energy control centers. Wide Area Measurement system (WAMS): Architecture, Components of WAMS, Applications: Voltage Stability Assessment, Frequency stability Assessment, Power Oscillation Assessment, Communication needs of WAMS, Wide Area Monitoring Protection & Control, and Remedial Action Scheme.

UNIT - II POWER SYSTEM AUTOMATION

Lecture Hrs: 8

Introduction, Evolution of Automation Systems, History of Automation Systems, Supervisory Control and Data Acquisition (SCADA) Systems, Components of SCADA Systems, SCADA Applications, SCADA in Power Systems, SCADA Basic Functions, SCADA Application Functions, Advantages of SCADA in Power Systems, Deferred Capital Expenditure, Optimized Operation and Maintenance Costs, Equipment Condition Monitoring (ECM), Sequence of Events (SOE) Recording, Power Quality Improvement, Data Warehousing for Power Utilities, Power System Field, Transmission and Distribution Systems, Customer Premises, Types of Data and Signals in Power Systems, Flow of Data from the Field to the SCADA Control Center

UNIT - III SCADA FUNDAMENTALS

Lecture Hrs: 12

Introduction, Open System: Need and Advantages, Building Blocks of SCADA Systems, Remote Terminal Unit (RTU), Evolution of RTUs, Components of RTU, Communication Subsystem, Logic Subsystem Termination Subsystem, Testing and Human-Machine Interface (HMI) Subsystem, Power Supplies, Advanced RTU Functionalities, Intelligent Electronic Devices (IEDs), Evolution of IEDs, IED Functional Block Diagram, Hardware and Software Architecture of the IED, IED Communication Subsystem, IED Advanced Functionalities, Tools for Settings, Commissioning, and Testing, Programmable LCD Display, Typical IEDs, Data Concentrators and Merging Units, RTUs, IEDs, and Data Concentrator, Merging Units and IEDs.

UNIT - IV SUBSTATION AUTOMATION

Lecture Hrs:12

Substation Automation: Technical Issues, System Responsibilities, System Architecture, Substation Host Processor, Substation LAN, User Interface, Communications Interfaces, Protocol Considerations. The New Digital Substation, Process Level, Protection and Control Level, Station Bus and Station Level, Substation Automation Architectures, Legacy Substation Automation System, Digital Substation Automation Design, New

M.TECH. IN ELECTRICAL POWER SYSTEMS / POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

versus Existing Substations. Drivers of Transition, Migration Paths and the Steps Involved, Value of Standards in Substation Automation, Substation Automation (SA) Application Functions, Integrated Protection Functions: Traditional Approach and IED-Based Approach. Automation Functions, Enterprise- Level Application Functions.

UNIT - V VOLTAGE STABILITY

Lecture Hrs:10

Basic concepts, Voltage collapse – general characterization, classification, Voltage stability analysis – modeling, dynamic analysis, static analysis, shortest distance to instability, continuation power flow analysis, prevention of voltage collapse – design measures, operating measures.

Textbooks:

M.TECH. IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	MODERN CONTROL THEORY	L	T	P	C
21D07203b	(PE-III)	3	0	0	3
	Semester]	I	

Course Objectives: To make the student

- Remember and understand the concept of state space representation, Solution of state equation, STM, linearization of nonlinear systems, controllability and observability concepts, principles of duality, concepts of optimal and Lyapunov stability.
- Apply the above concepts to analyze controllability, Observability and pole placement by state feedback
- Analyze the concept of regulator, stability and sensitivity using various methods and disturbance rejection
- Design Full order observer and reduced order observer.

Course Outcomes (CO): Student will be able to

- Understand the state space representation, controllability and observability concepts, principles of duality, concepts of optimal and Lyapunov stability.
- Apply the state equations, pole placement by state feedback.
- Analyze controllability & observability of state models.
- Design full order observer and reduced order observer.

UNIT - I STATE VARIABLE DISCRIPTION Lecture Hrs: 10

Introductory matrix algebra and linear Vector Space, State space representation of systems- Linearization of a non-linear System- Solution of state equations- Evaluation of State Transition Matrix (STM).

UNIT - II	TRANSFORMATION,	POLEPLACEMENT	AND	Lecture Hrs: 8
	CONTROLLABILITY			

Similarity transformation and invariance of system properties due to similarity transformations. Minimal realization of SISO, SIMO and MISO transfer functions. Discretization of a continuous time state space model-Conversion of state space model to transfer function model using Fadeeva algorithm- Fundamental theorem of feedback control - Controllability and Controllable canonical form - Pole assignment by state feedback using Ackermann's formula— Eigen structure assignment problem.

UNIT - III OPTIMAL CONTROL Lecture Hrs: 12

Linear Quadratic Regulator (LQR) problem and solution of algebraic Riccati equation using Eigen value and Eigen vector methods- iterative method- Controller design using output feedback.

UNIT - IV OBSERVERS Lecture Hrs:12

Observability and observable canonical form-Design of full order observer using Ackermann's formula -Bass Gura algorithm- Duality between controllability and observability- Full order Observer based controller design-Reduced order observer design.

UNIT - V STABILITY ANALYSIS AND SENSITIVITY Lecture Hrs:10

Internal stability of a system- Stability in the sense of Lyapunov- Asymptotic stability of linear time invariant continuous and discrete time systems- Solution of Lyapunov type equation- Model decomposition and decoupling by state feedback- Disturbance rejection- sensitivity and complementary sensitivity functions.

Course Code	REACTIVE POWER COMPENSATION &	L	T	P	C
21D07203c	MANAGEMENT (PE-III)	3	0	0	3
	Semester	II			
	ves: To make the student				
	ify the necessity of reactive power compensation				
	ribe load compensation and various types of reactive power compens	ation in	transmi	ssion s	ystems
	rate reactive power coordination system				
	acterize distribution side and utility side reactive power management. les (CO): Student will be able to				
		xxmmat	riaal laa	da	
	d the importance of load compensation in symmetrical as well as uns arious compensation methods in transmission lines	symmet	ricai ioa	us	
	odel for reactive power coordination				
	ish demand side reactive power management & user side reactive po	wer ma	nageme	nt	
UNIT - I	LOAD COMPENSATION		re Hrs:		
	pecifications – Reactive power characteristics – Inductive and capa				sino –
	or as a voltage regulator – Phase balancing and power factor correcti				
Examples.	of us a voltage regulator. I have building and power ractor corrects	011 01 0	115) 111111	our rour r	oud _B
UNIT - II	STEADY STATE & TRANSIENT STATE	Lectu	re Hrs: 8	3	
	REACTIVE POWER COMPENSATION IN				
	TRANSMISSION SYSTEM				
Uncompensated	line – Types of compensation – Passive shunt and series and dyn	amic s	hunt coi	mpensa	tion –
	ne periods – Passive shunt compensation – Static compensation-Ser				
	using synchronous condensers –Examples.	1		•	
UNIT - III	REACTIVE POWER COORDINATION & DEMAND	Lectu	re Hrs: 1	12	
	SIDE MANAGEMENT				
Objective – Mat	hematical modeling – Operation planning – Transmission benefits –	Basic	concept	s of qua	lity of
power supply –	Disturbances - Steady - state variations - Effects of under Voltage	s – Fre	quency	– Harn	onics,
	and electromagnetic interferences. Load patterns - Basic methods -	load sh	aping –	Power 1	tariffs
	ariffs - penalties for voltage flickers and Harmonic voltage levels.				
UNIT - IV		Lectu	re Hrs:1	2	
	DISTRIBUTION & USER SIDE REACTIVE POWER				
	MANAGEMENT				
	Loss reduction methods – Examples – Reactive power planning				
	or placement - Retrofitting of capacitor banks - KVAR requirement				
•	g capacitors - Selection of capacitors - Deciding factors - Types of	of capa	citors, c	haracte	ristics
and Limitations.		1			
UNIT - V	REACTIVE POWER MANAGEMENT IN	Lectu	re Hrs:1	0	
	ELECTRIC TRACTION SYSTEMS AND ARC				
m : 1:	FURNACES	<u> </u>			
	f traction systems – Reactive power control requirements – Distrib				
	urnaces transformer – Filter requirements – Remedial measures – Po	wer tac	tor of an	arc fur	nace.

	COMMON COURSE	STRUCTURE & SYLLABI				
Course Code	POWER QU.	ALITY	L	T	P	С
21D07204a	(PE- IV)	3	0	0	3
		Semester	II	•		
Course Objecti	ves: To make the student					
To under	erstand power quality definition, powe	r quality standards.				
To remo	ember measuring & solving power qua	lity problems.				
 To appl 	y the various types of linear and nonli	near loads				
 To analy 	yse harmonic methodology, mitigation	techniques and case study				
Course Outcon	nes (CO): Student will be able to					
 Underst 	and the fundamentals & terminology	of power quality.				
Apply the second s	ne concept of power frequency disturb	ances, types of transients & tran	nsient	wavefor	ms.	
 Analyze 	the harmonic methodology & Electro	magnetic Interference concepts				
 Remem 	ber the necessity of grounding and me	thods of grounding.				
 Underst 	and different techniques of measuring	& solving power quality proble	ems			
UNIT - I	INTRODUCTION TO POV	VERQUALITY	Lect	ure Hrs:	10	
	wer Quality - Power Quality Progress of Power Suppliers and Users-Power		gy - F	Power Q	uality Is	ssues-
UNIT - II	POWER	FREQUENCY	Lect	ure Hrs:	8	

UNIT - II POWER FREQUENCY Lecture Hrs: 8
DISTURBANCE&TRANSIENTS

Introduction to Power Frequency Disturbance - Common Power Frequency Disturbances - Characteristics of Low Frequency Disturbances - Voltage Tolerance Criteria- ITIC Graph - Introduction to Transients - Transient System Model - Examples of Transient Models and Their Response - Power System Transient Modeling-Types and Causes of Transients - Examples of Transient Waveforms.

UNIT - III HARMONICS & ELECTROMAGNETIC Lecture Hrs: 12 INTERFERENCE (EMI)

Definition of Harmonics - Harmonic Number (h) - Odd and Even Order Harmonics - Harmonic Phase Rotation and Phase Angle - Voltage and Current Harmonics - Individual and Total Harmonic Distortion - Harmonic Signatures - Effect of Harmonics On Power System Devices - Guidelines For Harmonic Voltage and Current Limitation - Harmonic Current Mitigation - Introduction to EMI - Frequency Classification - Electrical Fields-Magnetic Fields-EMI Terminology-Power Frequency Fields-High Frequency Interference-EMI Susceptibility-EMI Mitigation-Cable Shielding-Health Concerns of EMI.

UNIT - IV GROUNDINGANDBONDING Lecture Hrs:12

Introduction to Grounding and Bonding-Shock and Fire Hazards-NEC Grounding Requirements-Essentials of a Grounded System-Ground Electrodes-Earth Resistance Tests-Earth Ground Grid Systems-Power Ground System-Signal Reference Ground(SRG)-SRG Methods-Single and Multipoint Grounding —Ground Loops — Electro chemical Reaction -Examples of Grounding Anomalies.

UNIT - V MEASURING AND SOLVING POWER QUALITY Lecture Hrs:10 PROBLEMS

Introduction to Power Quality Measurements-Power Quality Measurement Devices-Power Quality Measurements Test Locations-Test Duration-Instrument Setup- Instrument Guidelines — Power quality mitigating concepts and devices .

Textbooks:

- 1. Power quality by C. Sankaran, CRC Press, 1st Edition, 2001

M.TECH. IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

Course Code	Course Code DISTRIBUTED GENERATION & MICROGRID				С		
21D07204b					3		
	CONTROL (PE-IV) 3 0 0 3						
	ives: To make the student						
	 Able to know about the concept of distributed generation, distribution network & the concept of Microgrid, its configuration, advantages & limitations. 						
 Able to understand the basic concepts in combined heat and power, Wind energy conversion systems, solar photovoltaic systems & other renewable energy sources. 							
 Able to analyze the impact of Microgrid & Active distribution network management system on various factors. 							
 Able to know the effect of SCADA & understand the concept of Power quality disturbances, improvement technologies & issues of premium power in DC integration. 							
Course Outcomes (CO): Student will be able to							
 Understand the concept of distributed generation, distribution network & the concept of Microgrid, its configuration, advantages & limitations. Understand the basic concepts in combined heat and power, Wind energy conversion systems, Solar photovoltaic systems & other renewable energy sources. The impact of Microgrid & Active distribution network management system on various factors isknown. Understand the effect of SCADA & understand the concept of Power quality disturbances, improvement technologies & issues of premium power in DC integration. 							
UNIT - I	INTRODUCTION TO DISTRIBUTED	Lect	ure Hrs:	10			
Introduction to distributed generation - Active distribution network - Concept of Microgrid - Microgrid configuration - Interconnection of Microgrids - Technical and economical advantages of Microgrid - Challenges and limitations of Microgrid development - Management and operational issues of a Microgrid - Dynamic interactions of Microgrid with main grid – low voltage DC grid.							
UNIT - II	DISTRIBUTED ENERGY RESOURCES	Lect	ure Hrs:	8			
Introduction - Combined heat and power (CHP) systems: Micro-CHP systems - Wind energy conversion systems (WECS): Wind turbine operating systems - Solar photovoltaic (PV) systems: Classification of PV cell - Small-scale hydroelectric power generation - Other renewable energy sources - Storage devices.							

UNIT - III	MICROGRID	AND	ACTIVE	DISTRIBUTION	Lecture Hrs: 12
	NETWORK MANAGEMENTSYSTEM				

Introduction - Impact on heat utilization - Impact on process optimisation - Impact on market - Impact on environment - Impact on distribution system - Impact on communication standards and protocols - Network management needs of Microgrid - Microsource controller - Central controller.

UNIT - IV SCADA AND ACTIVE DISTRIBUTION NETWORKS | Lecture Hrs:12

Introduction - Existing DNO SCADA systems - Control of DNO SCADA systems - SCADA in Microgrids - Human-machine interface (HMI) - Hardware components - Communication trends in SCADA - Distributed control system (DCS) - Sub-station communication standardization - SCADA communication and control architectures - Communication devices.

UNIT - V	IMPACT OF DG INTEGRATION ON POWER QUALITY AND	Lecture Hrs:10
	RELIABILITY	

Introduction - Power quality disturbances - Power quality sensitive customers - Power quality improvement technologies - Impact of DG integration - Issues of premium power in DG integration.

M.TECH. IN ELECTRICAL POWER SYSTEMS / POWER SYSTEMS

M.TECH. IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	EHVAC TRANSMISSION	L	T	P	С
21D07204c	(PE-IV)	3	0	0	3
	Semester	II	•	•	
Course Objecti	ives: To make the student				
• To unde	erstand the basic concepts of EHVAC				
 To Iden 	tify the factors affecting AC-DC transmission				
• To anal	yze travelling waves and the effects of corona like audible noise				
• To estin	nate field intensity at any point in EHV system with the help of differ	ent co	mputati	onal me	thod

Course Outcomes (CO): Student will be able to

- Understand the basic concepts of EHVAC
- Identify the factors affecting AC-DC transmission
- Analyze travelling waves and the effects of corona like audible noise
- Estimate field intensity at any point in EHV system with the help of different computational method.

UNIT - I PRELIMINARIES Lecture Hrs: 10

Necessity of EHV AC transmission – Advantages and problems – Power handling capacity and line losses-Mechanical considerations – Resistance of conductors – Properties of bundled conductors – Bundle spacing and bundle radius - Examples.

UNIT - II LINE AND GROUND REACTIVE PARAMETERS Lecture Hrs: 8

Line inductance and capacitances – Sequence inductances and capacitances – Modes of propagation – Ground return – Examples. Electrostatics – Field of sphere gap – Field of line changes and properties – Charge – potential relations for multi-conductors – Surface voltage gradient on conductors – Distribution of voltage gradient on subconductors of bundle – Examples.

UNIT - III CORONA EFFECTS Lecture Hrs: 12

Power loss and audible noise (AN) – corona loss formulae – Charge voltage diagram – Generation, characteristics – Limits and measurements of AN – Relation between 1-phase and 3 -phase AN levels – Radio interference (RI)

- Corona pulses generation, properties, limits – Frequency spectrum – Modes of propagation – Excitation function

– Measurement of RI, RIV and excitation functions - Examples.

UNIT - IV ELECTROSTATIC FIELD & TRAVELING WAVE THEORY Lecture Hrs:12

Electrostatic field: calculation of electrostatic field of EHV/AC lines – Effect on humans, animals and plants – Electrostatic induction in un-energised circuit of double - circuit line – Electromagnetic interference - Examples. Traveling wave expression and solution - Source of excitation - Terminal conditions - Open circuited and short circuited end - Reflection and refraction coefficients - Lumped parameters of distributed lines - Generalized constants - No load voltage conditions and charging current.

UNIT - V VOLTAGE CONTROL Lecture Hrs:10

Power circle diagram and its use – Voltage control using synchronous condensers – Cascade connection of shunt and series compensation – Sub synchronous resonance in series capacitor – Compensated lines – Static VAR compensating system.

M.TECH, IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	RENEWABLE ENERGY SYSTEMS LAB	L	T	P	C
21D07205		0	0	4	2
	Semester	II			

Course Objectives: To make the student

- Understand how to write the coding in MATLAB/Mipower
- Apply the SVC,STATCOM for voltage profile improvements & UPFC in power system networks.
- Analyze the data related to load flows incorporating SVC & STATCOM.
- Analyze operation of TCSC, STATCOM & SSSC for a transmission line fed by an ac supply.

Course Outcomes (CO): Student will be able to

- To observe the I-V and P-V curves and Series and Parallel connection of Solar systems
- To study the sun tracking and MPPT Charge Controllers of Solar systems
- To analyze Power, Voltage & Frequency Measurement of Wind Generator
- To Understand the Effect of temperature variation and Irradiation on Photovoltaic Array

List of Experiments:

- 1. Draw the I-V and P-V curves of Solar Panel using PV Panel
- 2. Study of Series and Parallel connection of Solar Panels
- 3. Study of Sun tracking system
- 4. Maximum Power Point Tracking Charge Controllers
- 5. Inverter control for Solar PV based systems
- 6. Power, Voltage & Frequency Measurement of output of Wind Generator
- 7. Impact of load and wind speed on power output and its quality
- 8. Performance of frequency drop characteristics of induction generator at different loading condition
- 9. Charging and Discharging characteristics of Battery

Simulation Experiments

- 1. Modelling of PV Cell
- 2. Effect of temperature variation on Photovoltaic Array
- 3. Effect of Irradiation on a Photovoltaic Array
- 4. Design of solar PV boost converter using P&O MPPT technique

Web Sources: https://www.vlab.co.in

Note: Conduct any 7 experiments from 1-9 list and minimum 3 experiments from 1-

4 of Simulation experiments

M.TECH. IN ELECTRICAL POWER SYSTEMS / POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	FACTS DEVICES & SIMULATION LAB	L	T	P	C
21D07206		0	0	4	2
	Semester]	П	

Course Objectives: To make the student

- Understand how to write the coding in MATLAB/Mipower
- Apply the SVC,STATCOM for voltage profile improvements & UPFC in power system networks.
- Analyze the data related to load flows incorporating SVC & STATCOM.
- Analyze operation of TCSC, STATCOM & SSSC for a transmission line fed by an ac supply.

Course Outcomes (CO): Student will be able to

- Understand Load balancing using compensators.
- Apply load balancing using Compensators.
- Analyse load flow incorporating SVC & STATCOM.
- Develop a Simulation model for STATCOM & UPFC.

List of Experiments:

- 1. Voltage regulation using shunt and series compensation
- 2. Load balancing in power system network using compensators
- 3. Simulation of TCSC
- 4. Voltage profile improvement using SVC
- 5. Voltage profile improvement using STATCOM
- 6. Transient Stability enhancement using STATCOM.
- 7. Simulation of UPFC with mathematical models
- 8. Load flow incorporating SVC
- 9. Load flow incorporating STATCOM
- 10. Simulation of DVR
- 11. Transmission Line Characteristics (P vs δ , Q vs δ , P vs Distance, Q vs Distance and V vs Distance) with and without Compensation
- 12. Sizing- simulation and operation of TCR and FC-TCR for a transmission line fed by an ac supply and feeding
 - (a) Resistive/inductive/capacitive load one at a time
 - (b) A load which can have leading as well as lagging behaviour
- 13. Sizing- simulation and operation of TCSC for a transmission line fed by an ac supply and feeding
 - (a) Resistive/inductive/capacitive load one at a time
 - (b) A load which can have leading as well as lagging behaviour
- 14. Sizing- simulation and operation of STATCOM for a transmission line fed by an ac supply and feeding
 - (a) Resistive/inductive/capacitive load one at a time
 - (b) A load which can have leading as well as lagging behaviour
- 15. Sizing- simulation and operation of SSSC for a transmission line fed by an ac supply and feeding
 - (a) Resistive/inductive/capacitive load one at a time
 - (b) A load which can have leading as well as lagging behaviour

COMMON COURSE STRUCTURE & SYLLABI

Course Code	RESTRUCTURED POWER SYSTEMS	L	T	P	C			
21D07301a	(PE-V)	3	0	0	3			
	Semester		I	II				
Course Objectives	: To make the student							
 Understa 	nd basic concepts of the restructuring of power industry and market	models						
 Analyze about the fundamental concepts of congestion management, Transfer Capability issues and 								
ancillary se	rvice management.							
	e transmission cost allocation methods to evaluate the cost.							
	he operational planning activities in different competitive environment.							
Course Outcomes	(CO):Student will be able to							
 Understand 	I the differences between the conventional power system operation a	and ther	estructi	ared on	e			
and basics	concepts of market power, electricity pricing and competitive enviro	onment.						
 Analyze th 	e concepts of Independent System Operator (ISO) and Open	Acces	s Sam	e-Time	;			
	n System (OASIS).							
 Apply the 	methods to find Available Transfer Capability (ATC) and to allo	cate the	e Trans	smissio	n			
cost.								
	wer markets and market architectural aspects and short time Price for							
UNIT – I	KEY ISSUES IN ELECTRIC UTILITIES		re Hrs:					
	tructuring models - Independent System Operator (ISO) - Pow							
	t Power – Standard cost – Transmission Pricing – Congestion Pricing	ng – Ma	anagem	ent of I	Inter			
zonal/Intra zonal Co	<u> </u>							
UNIT - II	POWER SYSTEM OPERATION IN COMPETITIVE	Lectur	re Hrs:	8				
	ENVIRONMENT							
Introduction – Oper	rational Planning Activities of ISO – The ISO in Pool Markets – The	e ISO in	Bilate	ral Mar	kets			
- Operational Planr	ning Activities of a GENCO.							
UNIT - III	AVAILABLE TRANSFER CAPABILITY (ATC)	Lectur	re Hrs:	10				
	&ELECTRICITY PRICING	Lectur	icins.	10				
Transfer Comphility	Issues – ATC – TTC – TRM – CBM Calculations – Calculation	of AT	C hoss	d on m				
	Pricing: Introduction – Electricity Price Volatility Electricity Price		28 – Cn	anenge	<i>2</i> 5 10			
Electricity Pricing – Construction of Forward Price Curves – Short-time Price Forecasting. UNIT - IV OPEN ACCESS SAME-TIME INFORMATION Lecture Hrs: 9								
UN11 - 1V	SYSTEM (OASIS) &MARKETPOWER							
Structure of OASIS	5 – Posting of Information – Transfer capability on OASIS – Mar	l rkat Day	wor. In	troduct	ion			
	narket Power – Mitigation of Market Power – Examples	. NCL POV	wei. int	.10duct1	1011 —			
Different types of fi	iaiket rowet – Mittigation of Market Power – Examples							

UNIT - V TRANSMISSION COST ALLOCATION Lecture Hrs: 10 METHODS & ANCILLARY SERVICES MANAGEMENT

Transmission Cost Allocation Methods: Postage Stamp Rate Method – Contract Path Method – MW-Mile Method – Unused Transmission Capacity Method – MVA-Mile method – Comparison of cost allocation methods – Ancillary Services Management: Introduction – Reactive Power as an Ancillary Service, a Review – Synchronous Generators as Ancillary Service Providers.

COMMON COURSE STRUCTURE & SYLLABI

Course Code	POWER SYSTEM AUTOMATION	L T P							
21D07301c	(PE-V)	3	0	0	3				
	Semester]	Ш					
Course Objectiv	res: To make the student			,					
• Under	stand the basic concepts of deregulation, power system automation.			,					
 Analy 	ze about the energy control centers and applications of automation.								
 To app 	bly the techniques to solve the problems in deregulated system and aut	omatio	n.						
• Deve	op the models to control the system and energy control centers.								
Course Outcom	es (CO):Student will be able to								

- Understand the concepts of evolution of automation systems, SACADA, Congestion management.
- Analyze the techniques to resolve problems in energy control centers, data ware housing.
- Apply the techniques to get the optimum control in the system by using automation at the substation level and distribution level.
- Develop the real time case studies to solve the critical problems in power system automation.

UNIT – I POWER SYSTEM CONTROL AND DEREGULATION Lecture Hrs: 10

Introduction – Operation of power systems and modes – Organization and operator activities, Investment factor and control centre experiences – Deregulation – need for deregulation and Advantages of deregulation in power system – Restructuring Models PoolCo. Model – Bilateral Model and Hybrid Model – Independent system operator (ISO) – Role of ISO – Congestion Management.

UNIT - II POWER SYSTEM AUTOMATION Lecture Hrs: 9

Evolution of automation systems – SCADA in Power system – Building blocks of SCADA system – Remote terminal unit – Intelligent electronic devices – Data concentrators and merging units – SCADA communication systems – Master station – Human-machine interface – Classification of SCADA systems.

UNIT - III SUBSTATION AUTOMATION

Lecture Hrs: 10

Substation automation – Conventional automation – New smart devices for substation automation – new integrated digital substation – Technical issues new digital simulation – Substation automation architectures – Substation automation applications functions – Benefits of data warehousing.

UNIT - IV ENERGY CONTROL CENTERS

Lecture Hrs: 10

Introduction – Energy control centers – EMS framework – Data acquisition and communication – Generation operation and management – Transmission operations – Real time Study-mode Simulations – Post-event analysis and energy scheduling and accounting – Dispatcher training simulator – Smart transmission.

UNIT - V DISTRIBUTION AUTOMATION

Lecture Hrs: 10

Introduction to Distribution automation – Customer, feeder and substation automation – Subsystems in a distribution control center – Distributed Management System (DMS) framework integration with subsystems – Advanced real-time DMS applications – Advanced analytical DMS applications – DMS coordination with other systems.

M.TECH. IN ELECTRICAL POWER SYSTEMS/POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	DICACOOD MANAGONONO	L	T	P	C
21DAC101b	DISASTER MANAGEMENT	2	0	0	0
	Semester				

Course Objectives: This course will enable students:

- Learn to demonstrate critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Critically evaluate disaster risk reduction and humanitarian response policy and practice from Multiple perspectives.
- Developanunderstandingofstandardsofhumanitarianresponseandpracticalrelevanceinspecific types of disasters and conflict situations
- Criticallyunderstandthestrengthsandweaknessesofdisastermanagementapproaches, planning and programming in different countries, particularly their home country or the countries they work in

UNIT - I

Introduction:

Disaster:Definition,FactorsandSignificance;DifferenceBetweenHazardandDisaster;Naturaland Manmade Disasters: Difference, Nature, Types and Magnitude.

Disaster Prone Areas in India:

Study of Seismic Zones; Areas Prone to Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post- Disaster Diseases and Epidemics

UNIT - II

Repercussions of Disasters and Hazards:

Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughtsand Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts.

UNIT - III

Disaster Preparedness and Management:

Preparedness: Monitoring of Phenomena Triggering ADisasteror Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and Other Agencies, Media Reports: Governmental and Community Preparedness.

UNIT - IV

Risk Assessment Disaster Risk:

Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. TechniquesofRiskAssessment,GlobalCo-OperationinRiskAssessmentand Warning, People's Participation in Risk Assessment. Strategies for Survival.

UNIT - V

Disaster Mitigation:

Meaning, Conceptand Strategies of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India.

Course Code	WASTE TO ENERGY	L	T	P	C
21DOE301e		3	0	0	3
	Semester	III			
Course Objective	es:				
 Introduce 	and explain energy from waste, classification and devices to c	conve	ert w	aste	to
energy.					
 To impart 	knowledge on biomass pyrolysis, gasification, combustion and con	ivers	ion p	oroce	SS.
 To educat 	e on biogas properties, bio energy system, biomass resources and t	heir (class	ifica	tion
	ass energy programme in India.				
Course Outcome	s (CO): Student will be able to				
	about overview of Energy to waste and classification of waste.				
	e knowledge on bio mass pyrolysis, gasification, combustion and c	onve	rsior	ı pro	cess
in detail.				•	
 To gain k 	knowledge on properties of biogas, biomass resources and progra	amm	es to	con	vert
	energy in India.				
UNIT - I		Lec	ture	Hrs:1	.0
Introduction to E	nergy from Waste: Classification of waste as fuel - Agro base	d, Fo	rest	resid	lue,
	MSW – Conversion devices – Incinerators, gasifiers, digestors				
UNIT - II				Hrs:1	
	s: Pyrolysis - Types, slow fast - Manufacture of charcoal - M	1 etho	ds -	Yie	lds
and application –	Manufacture of pyrolytic oils and gases, yields and applications.				
UNIT - III		Lec	ture	Hrs:1	2
Biomass Gasifica	tion: Gasifiers - Fixed bed system - Downdraft and updraft gas	sifiers	s – I	Fluidi	zed
bed gasifiers – De	sign, construction and operation - Gasifier burner arrangement for	r ther	mal	heat	ing
 Gasifier engin 	e arrangement and electrical power - Equilibrium and kinet	ic co	nsid	eratio	on
in gasifier operation	on

M.TECH. IN ELECTRICAL POWER SYSTEMS / POWER SYSTEMS

COMMON COURSE STRUCTURE & SYLLABI

Course Code	COST MANAGEMENT OF ENGINEERING	L	T	P	C
21DOE301a	PROJECTS	3	0	0	3
	Semester		III		
Course Objectives:					
To explain co	ost concepts and objectives of costing system and cost manager	ment	nroce	225	

- To explain cost concepts and objectives of costing system and cost management process
- To provide knowledge and explain Cost behaviour in relation to Volume and Profit and pricing decisions.
- To know the concepts of target costing, life cycle costing and activity based cost management in a project or business.
- To discuss on budget and budgetary control, type of budgets in a business to control costs
- To provide knowledge on project, types of projects, stages of project execution, types of project contracts and project cost control.

Course Outcomes (CO): Student will be able to

- Know the cost management process and types of costs
- Learn and apply different costing methods under different project contracts
- To understand relationship of Cost-Volume and Profit and pricing decisions.
- Prepare budgets and measurement of divisional performance.
- Acquires knowledge on various types of project contracts, stages to execute projects and controlling project cost..

UNIT - I Lecture Hrs:10 Introduction and Overview of the Strategic Cost Management Process - Cost concepts in decisionmaking; Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.

UNIT - II Lecture Hrs:12

Cost Behavior and Profit Planning: Marginal Costing- Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems; Pareto Analysis Just-in-time approach, Theory of constraints.; Divisional performance management: - Measurement of Divisional profitability - pricing decisions - transfer pricing.

UNIT - III Lecture Hrs:10

Target costing- Life Cycle Costing - Activity-Based Cost management: Activity based costing-Value-Chain Analysis- Bench Marking; Balanced Score Card.

UNIT - IV Lecture Hrs:10

Budgetary Control; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

UNIT - V Lecture Hrs:12

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities. Detailed Engineering activities, Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process.

M.TECH. IN ELECTRICAL POWER SYSTEMS / POWER SYSTEMS

Course Code	INTERNET OF THINGS& ITS APPLICATIONS	L	T	P	С
21DOE301i		3	0	0	3
	Semester	III			
Course Objective	2S:				
 Introduce 	the fundamental concepts of IoT and physical computing				
 Expose th 	e student to a variety of embedded boards and IoT Platforms				
 Create a b 	pasic understanding of the communication protocols in IoT commun	nications	S.		
 Familiariz 	ze the student with application program interfaces for IoT.				
 Enable str 	udents to create simple IoT applications.				
Course Outcome	s (CO): Student will be able to				
Choose th	ne sensors and actuators for an IoT application				
	otocols for a specific IoT application				
_	e cloud platform and APIs for IoT applications				
	nt with embedded boards for creating IoT prototypes				
	solution for a given IoT application				
• Establish
